CAREER OBJECTIVE

B.Tech Information Technology student with strong foundations in Java, Python, full-stack development, and AI technologies. Hands-on experience with Django, REST APIs, LangChain, Deep Agents, LLMs, RAG, and Agentic AI through academic projects and an Infosys AI internship. Seeking a Software Engineering or AI/ML Internship to apply technical skills and contribute to real-world products.

EDUCATION

Bachelor of Technology, Shri Vishnu Engineering College for Women Expected 2028

CGPA: 8.80 /10

ACHIEVEMENTS & LEADERSHIP

- **Alstom India Scholarship for STEM Education (2024–25):** Recipient of a **75,000 scholarship** through Buddy4Study for STEM education.
- **Team Leader – Infosys Springboard Virtual Internship:** Coordinating team tasks, supporting collaboration, tracking project progress, and contributing to effective project execution.

TECHNICAL SKILLS

Languages	Java, Python, C
Web & Backend	HTML, CSS, JavaScript, Django, REST APIs
AI & ML	LangChain, LLMs, RAG, Agentic AI, Deep Agents, ML/DL Fundamentals
Databases	MySQL, PostgreSQL
Tools	Git/GitHub, VS Code, Docker

INTERNSHIP EXPERIENCE

AI Intern July 2026 – September 2026

Infosys Springboard (Virtual Internship)

- Developed an AI Startup Idea Validator, a multi-agent platform that evaluates startup ideas through market research, competitor analysis, SWOT analysis, MVP recommendations, and go-to-market strategy generation.
- Designed and integrated specialized AI agents using the Deep Agents framework with DuckDuckGo Search, implementing a centralized shared-state architecture for exchanging context and intermediate results across agents.
- Built an AI-powered conversational advisor using Streamlit, FastAPI, PostgreSQL, and Docker for generating startup validation reports and interactive recommendations.

PROJECTS

FoodLoop AI – Smart Food Redistribution Platform *React/Vite, Node.js/Express, TypeScript, Google Gemini API*

- Designed and deployed **FoodLoop AI**, a full-stack web platform connecting verified food donors with orphanages and old-age homes, implementing a request-acceptance workflow that prevents overbooking across **concurrent, partial-quantity reservations**.
- Integrated the **Google Gemini API** to power an AI conversational assistant and demand-prediction module, enabling natural-language queries while enforcing **role-based authorization** to restrict AI access to each user’s permitted data scope.
- Built a **verification-first access control system** with isolated donor/consumer authentication, real-time in-app chat triggered on request acceptance, and an auto-expiring, time-bound donation lifecycle.
- Deployed the application to **Render** with CI-linked builds and environment-based secrets management; resolved dependency conflicts and validated end-to-end functionality including builds, server startup, and API responses before production release.

CERTIFICATIONS

- Amazon Future Engineer – Certified in **Java & Data Structures and Algorithms**
- Infosys Springboard – Certified in **Java Programming Fundamentals**
- IBM Skills Network (Cognitive Class) – Certified in **Prompt Engineering for Everyone**
- Google Cloud – **Introduction to Generative AI Studio**
- IEEE Conquer – Certified for successful participation in technical skill enhancement programs

EXTRA-CURRICULAR ACTIVITIES

- **Volunteer Coordinator – College Technical Fest:** Coordinated event logistics and participant registration for 500+ attendees.
- **GDG Hackathon Participant:** Collaborated with cross-functional teams to build and pitch solutions under tight deadlines.
